

CONTENTS

	Preface	xi
1	The Role of Multivariate Statistical Methods in Behavioral Research	1
1.1	The Paradigm of Statistical Inference	1
1.2	Applications of Informative Inference in Behavioral Research	5
1.3	Special Problems of Multivariate Research	20
2	Mathematical Prerequisites for Multivariate Analysis	23
2.1	The Problem of Notation	23
2.2	Elements of Vector Algebra	24
2.3	Elements of Matrix Algebra	34
2.4	Determinants	60
2.5	Vector and Matrix Derivatives	66
2.6	Transformations	71
2.7	Quadratic Forms	80
3	The Multivariate Normal Distribution	103
3.1	The Assumptions of Multivariate Normal Statistical Analysis	104
3.2	Review of Elementary Distribution Theory	112
3.3	The Multivariate Normal Distribution	129
3.4	Some Sampling Distributions Derived from the Multivariate Normal Distribution	143
3.5	Checking Distribution Assumptions	155
4	Principles and Methods of Multivariate Least-Squares Estimation	165
4.1	Polynomial Regression Analysis: Univariate	165
4.2	Polynomial Regression Analysis: Multivariate	208
5	Linear Models for Designed Experiments	233
5.1	Randomization and Gauss-Markov Theory in the Analysis of Experiments	235
5.2	One-way Designs	236
5.3	Crossed Designs	269
5.4	Applications of Crossed Designs	305
5.5	Error Reduction by Analysis of Covariance	355

6	Linear Models in Nonexperimental Studies	373
6.1	Prediction	374
6.2	Classification	395
6.3	Comparative Studies	415
6.4	Surveys	425
7	Analysis of Repeated Measurements	447
7.1	Analysis of Repeated Measurements in the One-Sample Case	449
7.2	Analysis of Repeated Measurements in the n -Sample Case	468
7.3	Analysis of Covariance of Repeated Measurements	489
8	Multivariate Analysis of Qualitative Data	506
8.1	Single-Response Data	507
8.2	Multiple-Response Data	551
	Appendixes	
A	A Table of the Generalized F Statistic	560
B	Orthogonal Polynomials to $n = 10$	584
	References	589
	Indexes	607
	Name Index	
	Subject Index	
	Addendum	
	Univariate and Multivariate Analysis of Variance of Time-Structured Data	624
