1. Graphical User Interface

1.1 Introduction

The LISREL graphical user's interface is also available as an online Help file. The Help file has features that simplify navigation across topics.

The easiest way to start using LISREL is to create a shortcut on your desktop or to click **Start, All Programs**, **SSI Inc.**, **LISREL**. LISREL opens with the basic menu bar shown below.

🔀 LISREL for Windows				
File View	Help			
D 🖻 🗃	. X h G	**	6 1 ?	

Other toolbars automatically appear when specific types of files are opened. These toolbars are designed to assist the user in performing specific tasks. The three most frequently used toolbars are shown below.

Text Editor Toolbar (text files)

Path Diagram Toolbar (*.pth files)

ſ	😸 LISREL for Windows - EX1A.PTH	
	File Edit Setup Draw View Image Output Window Help	
	Groups: Regression of GNP Models: Structural Model Estimates: Estimates:	•

This guide gives an overview of each element of the LISREL interface. If you are unsure what the LISREL button icons mean, position the mouse pointer over the icon to display the button's name.

We start with a discussion of the basic toolbar and menu options.

1.1.1 File Menu

The File menu is the starting point for running LISREL. When the File menu is selected, the following options are displayed.

File	View Help	
	New	Ctrl+N
	Open	Ctrl+O
	Import Data	
	Print Setup	
	1 Aspart_POI.prl	
	2 Depress.lis	
	3 HOLZ.Isf	
	4 msemex.PTH	
	Exit	

A short discussion of the File menu options follows.

New Option

The **New** option on the **File** menu is associated with the **New** dialog box shown below. This dialog box contains five file types that may be opened as new files.

These types are:

- Syntax Only (*.prl, *.lis, etc.)
- Output
- HTML Output
- LISREL System Data File (*.lsf)
- SIMPLIS Project (*.**spj**)
- LISREL Project, and (*.**Ipj**)
- Path Diagram (*.**pth**)

New New Syntax Only Output HTML Output USBEL Data	OK E Cancel
SIMPLIS Project	v

Syntax Only Option

LISREL opens with a new blank document ready for editing. The user can type in new LISREL, SIMPLIS or PRELIS syntax, copy text from a clipboard, etc.

Note:

Be sure to save the new text by assigning a filename to it.

LISREL Data Option

When the **LISREL Data** option is selected, LISREL opens a blank data spreadsheet (see the *PRELIS Examples Guide* for a description of how to insert variable names and cases). LISREL system data files are saved as *.**Isf** files. To change variable names, make graphical displays of the data, calculate polychoric correlation coefficients, do regression analysis, etc. see the various examples in *the PRELIS Examples Guide*.

SIMPLIS Project Option

A SIMPLIS project has a *.**spj** file extension, and once opened is used to build or modify SIMPLIS syntax interactively. This is described in detail in the *LISREL Examples Guide*.

LISREL Project Option

A LISREL project has a *. **Ipj** file extension. For more information on how to build or modify LISREL syntax interactively, consult *the LISREL Examples Guide*.

Open Option

The **Open** option on the **File** menu allows you to open a file that has been created previously. It is associated with the **Open** dialog box shown below. You may select any of the following file types:

- Syntax Only (*.spl,*.lis,*.prl)
- Output (*.out,*.fit)
- LISREL Data (*.lsf)
- SIMPLIS Project (*.**spj**)
- LISREL Project (*.lpj)
- Path Diagram (*.**pth**)
- All Files (*.*)

Ŧ	LISR SIM LISR Path All F	EL Data (*.lsf) PLIS Project (*.spj) EL Project (*.lpj) Diagram (*.pth) Files (*.*)

Syntax Only Option

In the examples that accompany the program, the following filename extensions are used to distinguish between PRELIS, SIMPLIS and LISREL syntax files.

- **prl** : PRELIS syntax file
- **spl** : SIMPLIS syntax file
- **lis** : LISREL syntax file

LISREL Data Option

If a file of type *.**Isf** is opened, it is displayed in the form of a spreadsheet. For example, if **holz.Isf** is selected from the **tutorial** folder, the spreadsheet shown below is obtained

HOLZ.Isf							٢.
	GENDER	AGEYEAR	BIRTHMON	VISPERC	CUBES	LOZENGES	
1	0.00	13.00	2.00	20.00	31.00	3.00	
2	1.00	13.00	8.00	32.00	21.00	17.00	Ξ
3	1.00	13.00	2.00	27.00	21.00	15.00	
4	0.00	13.00	3.00	32.00	31.00	24.00	
5	1.00	12.00	3.00	29.00	19.00	7.00	
6	1.00	14.00	2.00	32.00	20.00	18.00	
7	0.00	12.00	2.00	17.00	24.00	8.00	
8	1.00	12.00	3.00	34.00	25.00	15.00	
9	1.00	13.00	1.00	27.00	23.00	12.00	
10	1.00	12.00	6.00	21.00	21.00	6.00	-
	< III					4	

Note:

LISREL system files are associated with the SY command in LISREL syntax, and the RA and RAW Data from LISREL and SIMPLIS commands respectively.

SIMPLIS Project Option

A *.**spj** file is obtained by creating SIMPLIS syntax interactively (see the *LISREL Examples Guide*) or by building syntax from a path diagram.

When a *.**spj** file is opened, the SIMPLIS syntax and **Relationships** keypad are displayed. The keypad may be used to add new syntax or to delete or modify existing syntax. For more information, see the *LISREL Examples Guide*.

LISREL Project Option

A *.**Ipj** file is obtained by creating LISREL syntax interactively or by building syntax from a path diagram (see *the LISREL Examples Guide* for examples)

One may use the Setup, Model or Output options on the main menu bar to add, modify or delete existing text.

Path Diagram Option

If the **Path Diagram** option is selected, all the files of a given folder with file extension *.**pth** are displayed. LISREL stores path diagrams as *. **pth** files.

A *. **pth** file is displayed below.

All Files Option

If the **All Files** option is selected, all the files of a given folder are displayed. Below is an illustration showing the selection of the file **boys.mea**. Note that LISREL, SIMPLIS and PRELIS syntax files have the default extensions of *.lis, *.spl and *.prl respectively. The user may choose any other extension when creating a syntax file.

Once **OK** is clicked, the file **boys.mea** is displayed. This file may be modified by using the cut, copy, paste etc. functions of the built-in text editor.

Import Data in Free Format Option

The **Import Data in Free Format** option on the **File** menu is associated with the **Open Data File** dialog box. A data set, stored in free format, can be converted to a LISREL system data file (*.**Isf**) by selecting this option.

Organize • New folder		III • 🗌 🚱
 Documents Music Pictures Videos Homegroup 	Name ▲ ■ EX41.RAW ■ ■ EX43.RAW ■ ■ EX44.RAW ■ ■ EX46.DAT ■ ■ EX46.DAT ■	No preview available.

EX44.RAW D RAW File	ate modified: 3/7/2012 12:11 PM Size: 315 bytes Date created: 2/23/2001 11:13 AM	
File name:	EX44.RAW	▼ Free Format Data(*.dat;*.raw)

The **Import External Data in Other Formats** option on the **File** menu is associated with the **Input Database** dialog box. LISREL can import files from many software packages and convert these files to LISREL system data files. See the *PRELIS Examples Guide* for examples.

Print Setup Option

If this option is selected, the standard Windows print setup dialog box is displayed. This enables the user to select paper size, orientation and other properties of the installed printer.

Previously Opened Files Option

This portion of the **File** menu shows a list of the most recently opened files. To open one of the files listed, move the mouse cursor to the file name and click.

Exit Option

If this option is selected, all files opened in LISREL are closed and the user exits the application. If a file has been modified, the user will be prompted to save it before the application is closed.

1.2 View Menu

The View menu provides access to the Toolbar and Status Bar options discussed below.

🔚 LISREL for V	Windows - HOLZ.	lsf				
File Edit Da	ata Transformat	ion Statistics	Graphs Multilev	el SurveyGLIM	View Window	Help
🗋 🖻 📾 🔳	🎽 🖻 😰 😥	* 🕘 🛙 ?			✓ Toolbar	
ዋ 도 🔳 🗵					✓ Status Bar	
HOLZ.Isf					✓ Data Toolb	ar 🗧
	GENDER	AGEYEAR	BIRTHMON	VISPERC	CUBES	LOZENGES
1	0.00	13.00	2.00	20.00	31.00	3.00
2	1.00	13.00	8.00	32.00	21.00	17.00

Toolbar Option

If the **Toolbar** option is checked, the LISREL main menu bar is displayed as shown below.

Elistel for Windows									
<u>F</u> ile	<u>V</u> iew	<u>H</u> elp							
1	🖻 🗃	. X	-	Ċ	Ķ	¥		i	?

By opening a syntax file, all the **Edit** toolbar functions are activated as shown below:

***		ê 🙆	6		X.	• 0	2	¥	¥	é) E		?	
	а	b	С	d	е	f	g	h	i	j	k	I		

An explanation of the icon buttons designated by letters of the alphabet are as follows:

- New File (a)
- Open File (b)
- Import Data (c): Import data from other software applications and convert such files to *. Isf format.
- Save Text (d): This is the standard Windows function to save changes made to a file.
- **Cut Text (e)**: A marked block of text is moved to the clipboard. Move the cursor to the position in the existing file where you want to put this text, or open a file if text is to be moved to it. On the **Edit** menu, click **Paste** or use the **Paste** icon button on the **Edit** toolbar.
- **Copy Text (f)**: A marked block of text is copied to the clipboard. Move the cursor to the position where you want to copy the text or open a file if text is to be copied to it. On the **Edit** menu, click **Paste** or use the **Paste** icon button on the **Edit** toolbar.
- Paste Text (g): The clipboard contents are pasted into a file at the position of the cursor.

- Run LISREL Syntax (h): Click this icon button on the LISREL main toolbar to start a LISREL analysis based on the contents of the current file. This file must be a text file that contains either SIMPLIS or LISREL syntax.
- **Run** PRELIS **Syntax (i)**: Click this icon button on the LISREL main menu bar to start a PRELIS analysis based on the contents of the current file. This file must be a text file that contains PRELIS syntax.
- **Print Document (j)**: If this icon button is clicked, a standard Windows dialog box is displayed which enables the user to select an alternative printer, cancel the print job, etc.
- Help menu (k): Click this icon button to display the contents of the help file.

Status Bar Option

When the **Status Bar** option is checked, information regarding the program status appears in a bar at the bottom of the LISREL window as demonstrated below:

Change the printer and printing options

Data Toolbar Option

If the **Data Toolbar** option is checked (can only be checked when a LISREL system file is opened), the data toolbar is displayed as shown below.

ዮ 도 💷 🖾 📆

An explanation of the icon buttons, from left to right, is as follows:

- o Insert variable
- Insert case
- Univariate plot
- o Bivariate plot
- o Multivariate plot

1.3 The LSF Window

The exploratory analysis procedures available in PRELIS and statistical analysis procedures available in the Multilevel and SurveyGLIM modules can be performed using the GUI. When a LISREL system data file (*.lsf) is opened, the LISREL system file toolbar appears. The Edit menu has the usual cut, paste, select, delete, and find, etc. options.

1.3.1 File Menu

An additional option on the **File** menu is to export the contents of a *.**Isf** file to ASCII format and also to formats of all the well-known statistical packages.

LISREL for Windo	ows - HOLZ.Isf						
File Edit Data	Transformation Stat	istics Graphs	Multilevel	SurveyGLIM	View	Window	Help

4 ba1d.PTH		12	0	.00	12.00		12.00
Exit		10		001	10.00		0 00

The input for this dialog box is associated with the RA command in PRELIS syntax.

1.3.2 Edit Menu

The Edit menu provides standard Windows functions and access to the Format dialog box.

🔚 LI	LISREL for Windows - HOLZ.Isf						
File	Edit	Data	Transformation				
		Undo	Ctrl+Z				
		Cut	Ctrl+X				
		Сору	Ctrl+C				
		Paste	Ctrl+V				
		Format					

1.3.3 Format Option

The **Format** option on the **Edit** menu is associated with the **Format** dialog box. Use this dialog box to change the column widths and the number of decimals displayed. One can also align the data values by selecting **Left**, **Center** or **Right**.

Data Format	20.00	X
Column Width	11	ОК
Number of decimals	2	Cancel
Alignment		

1.3.4 Data Menu

The **Data** menu shown below enables one to modify the contents of the LISREL system file by, for example, changing variable types, inserting new variables, assigning category labels and defining missing value codes.

In this menu, the **Define Variables** option is associated with the CO and OR command in PRELIS and the **Select Variables/Cases** option is associated with the SE and SC commands in PRELIS respectively.

LISREL fo	or Win	dows - drug_selec	t.lsf				
File Edit	Data	Transformation	Statistics	G	raphs	Multileve	el
D 🖻 🗃	C	Define Variables					
drug se	Select Variables/Cases						
urug_st	Sort Case					τωδυ	Г
1	Ir	nsert Variable			712	80 50	-
2	Ir	nsert Cases				615.60	F
3	C	elete Variable				61.20	
4	D	Delete Case				1584.40	
5	v	Voight Cosos				54.30	
6	v	veight Cases				105.80	
7	S	urvey Design				51.40	

Examples of the use of most options are given in Chapter 3.

Define Variables Option

The Define Variables option on the Data menu is associated with the Define Variables dialog box.

When a variable is highlighted, *i.e.* selected, it can be renamed, its type can be changed, category labels can be assigned to ordinal variables, and missing values can be defined, as illustrated in the *PRELIS Examples Guide*.

Buttons on this dialog box are associated with the following PRELIS syntax:

- **Insert** : NE command
- Variable Type: CO, OR, CA, CB, CE commands
- Missing Values: MI command.

Select Variables/Cases Option

The Select Variables/Cases option on the Data menu provides access to two dialog boxes: the Select Variables dialog box and the Select Cases dialog box.

Select Variables Dialog Box

Use the **Select Variable** dialog box to select any subset of variables. Select **Output Options** to save the new data set as a *.**Isf** or *.**dat** file.

Select Data	/ariable(s)	Select Cases			X
Varia Gen Motl Fath Impp Rea Spe Writ Arith Inde Atte Clas Con Vert Kno Figu	able(s) List der hedu Jusiv id ach e m pen hio siff siff mpar oal wled		Select≥> ≤< Remove	Selected Variable(s): Classif Compar Verbal Knowled Figure Pattcomp	
Patt To clic Qutpu	comp select more king on the t Options	e than one varia variables to be	uble at a time,hold do selected Syntax	wn the CTRL key while	4

Select Cases Dialog Box

Create a new data set by selecting only odd or even cases, etc. Select **Output Options** to save the data to a new *.**Isf** file.

Select Data	
Select Variable(s) Select	Cases
Variable List Pupil School Grade Socio Language Gender Mothedu Fathedu Impulsiv Read Speach Write Arithm Indepen	Condition Select only those cases with value larger than (<) larger than (>) equal to (=) Delete variable after selection Select only those cases that are <u>o</u> odd <u>o</u> even <u>b</u> efore case number: after case number: Select those cases number that are odd
_< Remove	< III >
Qutput Options	Syn <u>t</u> ax <u>B</u> un Cancel

When this option is selected, a new variable is inserted into the PRELIS spreadsheet. All cases will be assigned a value of 0 by default. These numbers can be changed manually, or by using the **Compute** option on the **Transformation** menu.

To insert a variable between the variables CONTIN1 and ORDINAL1 in the LISREL system file **data100.lsf**, click on the label ORDINAL1 to highlight the column.

LISREL for Windows - DATA100.lsf					
File Edit Data Transformation	Statistics				
🗄 🕞 🥵 🔳 👗 🐂 🛍 😣 🛠	ð 1 ?				
P 🗲 🔟 🖄					
Insert Variable DATA100.lsf					

Select the **Insert Variable** option from the **Data** menu or click on the **Insert Variable** icon button to insert the new variable, shown as var7 in the illustration below. Note that all the values in the var7 column are equal to zero. Replace the zeros by entering the appropriate values.

n 🕤 💼 🔟 🖽

7	-0.42	0.00	4.00	2.00	1.00	-999999.00	-
	< III					Þ	•

Note:

This option is associated with the NE command in PRELIS.

When a case in the LISREL system file is highlighted before this option is selected, a new case is inserted into the LISREL spreadsheet. All variables will be assigned a value of 0 for this case. These numbers can be changed manually, or by using the **Compute** option on the **Transformation** menu. If, however, no case is highlighted before selection of this option, the **Insert Cases** dialog box will open to allow the user to specify the number of cases to be inserted. This dialog box is used to insert a number of new cases into the PRELIS spreadsheet. All variables will be assigned a value of 0 for this case. These numbers can be changed manually, or by using the **Compute** option on the **Transformation** menu. To insert a new record (case) between cases 13 and 14, click on the case number 14 button to highlight the case, as shown in the illustration below:

DATA100.Is	f						x
	CONTIN1	var7	ORDINAL1	ORDINAL2	ORDINAL3	CONTIN2	
12	1.90	0.00	7.00	-9999999.00	2.00	1.54

16	0.66	-999999.00	2.00	1.00	2.00

In the LISREL system file shown below, we wish to remove cases 13, 14 and 15. Select the **Data**, **Delete Cases** option or click the **Delete Cases** icon button to remove the selected case(s).

Delete Cases	
	case(s) starting from case 13
Oelete <u>f</u> rom case	13 to case 13
	OK Cancel

Note:

This dialog box is associated with the SC command in PRELIS.

Weight Option

The Weight option on the Data menu is associated with the Weight Variable dialog box.

PRELIS uses a weight variable to weigh each case. A variable is defined as a weight variable in order to specify that the *i*-th case is to be counted n_i times. The **Weight Variable** dialog box below shows the selection of the variable FREQ as a weight variable.

LSAT6.LSF		Weight Cases	
	ltem1		Freq
1	0.00	Item1 Add ≥>	3.00 🔺
2	0.00	Item2 Freq	6.00 🗉

1.3.5 Transformation Menu

The Transformation menu can be used to recode the values of a variable or to compute functions of variables.

LISREL for Windows - mepsdata.lsf						
File Edit Data Transformation Statistics						
i 🗅 😹 📾 🔳 🕴	Recode	?				
mepsdata.lsf Compute						

Examples of the use of most of these options can be found in the PRELIS Examples Guide.

Note:

Options on this menu are associated with the following PRELIS syntax:

- **Recode** : RE command
- Compute : NE command

Recode Option

The **Recode** option on the **Transformation** menu is associated with the **Recode Variables** dialog box. The **Recode Variables** dialog box shown below shows the recoding of the variable GENDER. All values of GENDER equal to zero are to be replaced with a value of -1. Once the old and new values are entered, click the Add button to add the recoding to the syntax window.

E LISREL for Windows - HOLZ.Isf	Recode Variables	
ISREL for Windows - HOLZ.Isf File Edit Data Transformation St Image: State	Recode Variables GENDER AGEYEAR BIRTHMON VISPERC CUBES LOZENGES PARCOMP SUCOMP WORDMEAN ADDITION	S 00

The **Compute** option on the **Transformation** menu is associated with the **Compute** dialog box.

This dialog box is used to add or create new variables and calculate functions of variables. A new variable may be added by clicking the **Add** button, and the rest of the equation is completed by dragging (or double-clicking) variable names to the syntax text box or clicking the *, +, etc. buttons. The **Output Options** may be used to change the random number seed when simulating data.

As an illustration, the **Compute** dialog box is used to add a new variable, AGEMON, and to define the new variable as a combination of other variables in the *.**Isf** file.

LISREL for Windows - HOLZ.Isf	Compute	x

Ready	- Lagged timeseries: LG newvar = oldvar lag = n Cancel						

1.3.6 Statistics Menu

The **Statistics** menu may be used to perform a variety of statistical procedures.

Note:

The options on this menu are associated with the following PRELIS syntax:

- Impute Missing Values : IM command
- Equal Thresholds : ET command
- Fix Thresholds : FT command
- Homogeneity Test : HT command
- Normal Scores : NS command
- Factor Analysis : FA command
- Regressions : RG command
- Two-Stage Least-Squares : RG command
- **Bootstrapping** : BS keyword
- **Output Options** : OU command.

Data Screening Option

For each variable in the spreadsheet, PRELIS lists all data values found in the raw data and the number and relative frequency of each data value, and it gives a bar chart showing the distribution of the data values.

For more information on data screening, see the PRELIS Examples Guide.

Impute Missing Values Option

The Impute Missing Values option on the Statistics menu is associated with the Impute Missing Values dialog box.

Missing values can be imputed from a set of matching variables. Select the list of variables to be imputed and click the **Add** (imputed variables) button. Similarly, a list of matching variables is selected.

😹 LISREL for Wi	indows - DATA10	0.lsf

Note:

This dialog box is associated with the IM command in PRELIS.

Multiple Imputation Option

The Multiple Imputation option on the Statistics menu is associated with the Multiple Imputation dialog box.

Missing values can be imputed using either the Expected Maximization (EM) or the Monte Carlo Markov Chain (MCMC) method of imputation.

Multiple Imputation	X
Variable List: CONTIN1 ORDINAL1 ORDINAL2 ORDINAL3 CONTIN2 ORDINAL4	Select Variables: CONTIN1 ORDINAL1 ORDINAL2 ORDINAL3 CONTIN2 ORDINAL4
	○ EM Algorithm
Output Options	Number of Iterations: 200
	Convergence Criterion: 0.00001
Treatment values mis	t of cases with all Replace with means 🔹
Cancel	Syntax Run

Note:

- By default, if no variables are selected from the Variable List, all variables are used.
- The **Output Options** button may be used to save the imputed data set, change the random number seed when simulating data, and simulate a specified number of data sets.
- The **Syntax** button may be used to generate PRELIS syntax for modification or saving of the relevant commands generated here.
- The Number of Iterations and Convergence Criterion fields can be used to control the iterative procedure.

See the *PRELIS Examples Guide* for a detailed example.

Equal Thresholds Option

The Equal Thresholds option on the Statistics menu is associated with the Equal Threshold Test dialog box.

To perform an equal thresholds test, select ordinal variables with the same number of categories. Click Add for each selection. When done, click **Syntax** to generate syntax or **Run** to run the example. The **Output Options** button may be used to control the PRELIS output.

		•		L				J

The command

ET varlist

will instruct PRELIS to estimate the thresholds under the condition that they are *equal* for all ordinal variables in the varlist. Underlying normality is assumed.

Note:

This dialog box is associated with the ET command.

Fix Thresholds Option

The Fix Thresholds option on the Statistics menu is associated with the Fix Threshold dialog box.

Select the variables to be fixed by clicking on a variable and then Add. Specify the name of the file that contains the thresholds and, when done, click **Syntax** to generate syntax or **Run** to run the example. **The Output Options** button may be used to control the PRELIS output. The thresholds of variables can be fixed by reading in threshold values for the variables from an external file created by first estimating the thresholds to be equal and saving the estimated thresholds to a file.

Polychoric correlations and means and variances of the variables underlying the ordinal variables can then be estimated for each group separately by including the commands

```
FT = filename varlist1
FT varlist2
```

and reading the fixed thresholds from the file filename. Thresholds given on the first line of the file will be assigned to variables in varlist1, thresholds in the second line to varlist2, etc. The thresholds for all variables in a particular varlist will be set equal to the values given in filename.

panelusa.th						
To select more than one variable at a time,hold down the CTRL key while clicking on the variables to be selected						

Note:

This dialog box is associated with the FT command in PRELIS.

Homogeneity Test Option

The Homogeneity Test option on the Statistics menu is associated with the Homogeneity Test dialog box.

The homogeneity test is a test of the hypothesis that the marginal distributions of two categorical variables with the same number of categories k are the same. This test can be applied to nominal as well as ordinal variables and is represented by the

HT var1 var2

command in the PRELIS syntax file.

The homogeneity test (HTest) differs from the equal threshold test (Etest) in two ways:

- It does not assume underlying normal variables.
- If underlying normality is assumed, the homogeneity hypothesis implies the equal threshold hypothesis.

To perform a homogeneity test, select a pair of ordinal variables with the same number of categories. Click **Add** for each pair. When done, click **Syntax** to generate syntax or **Run** to run the example. The **Output Options** button may be used to control the PRELIS output.

1	Homogeneity T	est		X

	To select more CTRL key while selected	than o e clickir	ne variable at a time,h ng on the pair of varial	nold down the oles to be				

Note:

This dialog box is associated with the HT command in PRELIS.

Normal Scores Option

The Normal Scores option on the Statistics menu is associated with the Normal Scores dialog box.

A possible solution to non-normality is to normalize the variables before analysis. Normal scores offer an effective way of normalizing a continuous variable for which the origin and unit of measurement have no intrinsic meaning, such as test scores. Normal scores may be computed for ordinal and continuous variables.

Normal Scores		X
Variable List:	Cancel	Run
NOCARE1 TOUCH1 INTERES1 NOSAY2	Output Options	Syntax

Select variables for which normal scores are to be calculated and use the **Add** button to add the selected variables to the text box. When done, click *Syntax* to generate syntax or **Run** to run the example. The **Output Options** button may be used to control the PRELIS output. An example of the calculation of normal scores is given in the *PRELIS Examples Guide*.

Note:

This dialog box is associated with the NS command in PRELIS.

Exploratory Factor Analysis Option

The Exploratory Factor Analysis option on the Statistics menu is associated with the Exploratory Factor Analysis dialog box. It can also be used to perform MINRES factor analysis.

Exploratory factor analysis is useful in the early stages of investigation to study the measurement properties of the observed variables. ML estimates of factor loadings (unrotated, VARIMAX rotated or PROMAX rotated) are provided. The number of factors may be specified by the user or will be determined automatically by the program.

Select a subset of variables and use the **Select** button to add the selection to the **Select a subset of Variables** list box. When done, click **Syntax** to generate syntax or **Run** to run the example. The **Output Options** button may be used to control the PRELIS output.

If no subset of variables is selected, all variables will be used.

Note:

This dialog box is associated with the FA (Factor Analysis), MR (MINRES) and FS (factor scores) commands in PRELIS.

EFA of Ordinal Variables Option

The EFA of Ordinal Variables option on the Statistics menu is associated with the Ordinal Factor Analysis dialog box.

Ordinal factor analysis is useful in the early stages of investigation to study the measurement properties of ordinal observed variables. ML estimates of factor loadings (unrotated, VARIMAX rotated or PROMAX rotated) are provided. The number of factors may be specified by the user or will be determined automatically by the program.

Select a subset of variables and use the **Select** button to add the selection to the **Select a subset of Variables** list box. When done, click **Syntax** to generate syntax or **Run** to run the example. The **Output Options** button may be used to control the PRELIS output.

If no subset of variables is selected, all variables will be used.

Select variables as *y*-variables or *x*-variables and use the **Add** button to add the selected variables to the respective fields. When done, click **Syntax** to generate syntax or **Run** to run the example. The **Output Options** button may be used to control the PRELIS output. Note that the **Fix Thresholds** and **Marginal Thresholds** buttons provide access to the **Fix Thresholds** and **Marginal Thresholds** dialog boxes discussed earlier in this section.

From the variable list, select a list of *y*-variables. Each of the *y*-variables must be of ordinal type. Select a set of fixed *x*-variables, for example CONTIN1 and CONTIN2. Univariate probit regressions will be performed for each remaining variable on CONTIN1 and CONTIN2.

PRELIS makes a distinction between *y*- and *x*-variables. The *x*-variables can be fixed or random variables. If they are random, their joint distribution is unspecified and assumed not to contain any parameters of interest. To specify *x*-variables, the command

Covariates varlist

must be included in the syntax file, where varlist is a list of the *x*-variables. All other variables will be assumed to be ordinal, unless they are declared continuous or censored.

Note:

This dialog box is associated with the LR, COvariates, and AP commands in PRELIS.

The Probit Regressions option on the Statistics menu is associated with the Probit Regressions dialog box.

For each ordinal *y*-variable, the univariate probit regression of y^* on the *x*-variables may be obtained, where y^* is the variable underlying *y*. For each pair of ordinal variables, the conditional polychoric correlation for a given *x* will also be estimated.

Probit Regressions	X
Variable List CONTIN1 ORDINAL1 ORDINAL2 ORDINAL3 CONTIN2 ORDINAL4	Or <u>d</u> inal Variables: ORDINAL1 ORDINAL3 ≤< Remove
	<u>Covariates:</u> <u>Add >></u> <u>CONTIN1</u> <u>CONTIN2</u> <u>CONTIN2</u> <u>CONTIN2</u> <u>CONTIN2</u>
Qutput Options	<u>Eix Thresholds</u> <u>M</u> arginal Thresholds
Syntax	Run Cancel

Select variables as *y*-variables or *x*-variables and use the **Add** button to add the selected variables to the respective fields. When done, click **Syntax** to generate syntax or **Run** to run the example. The **Output Options** button may be used to control the PRELIS output. Note that the **Fix Thresholds** and **Marginal Thresholds** buttons provide access to **the Fix Thresholds** and **Marginal Thresholds** dialog boxes discussed earlier in this section.

From the variable list, select a list of *y*-variables. Each of the *y*-variables must be of ordinal type. Select a set of fixed *x*-variables, for example CONTIN1 and CONTIN2. Univariate probit regressions will be performed for each remaining variable on CONTIN1 and CONTIN2.

PRELIS makes a distinction between *y*- and *x*-variables. The *x*-variables can be fixed or random variables. If they are random, their joint distribution is unspecified and assumed not to contain any parameters of interest. To specify *x*-variables, the command

COvariates varlist

must be included in the syntax file, where varlist is a list of the *x*-variables. All other variables will be assumed to be ordinal, unless they are declared continuous or censored.

Note:

This dialog box is associated with the Covariates, and AP commands in PRELIS.

Regressions Option

The **Regressions** option on the **Statistics** menu is associated with the **Regressions** dialog box. This dialog box is used to estimate the regression of any variable on any set of variables. For each regression, the following output is produced:

- estimated regression coefficients based on the moment matrix requested with the MA keyword.
- standard errors of the estimated regression coefficient
- *t*-values of the estimated regression coefficients
- residual variance
- squared multiple correlation

The basic form of the RG command is:

RG y-varlist ON x-varlist

😹 LISREL for W	indows - FITCHOL	.lsf	Regression

12	1.00	25.00	CTRL key while clicking on the variables to be selected
<			

Y-variables, Trigl and Cholest, and two predictors (*X*-variables), Age and Weight, are shown in the dialog box. PRELIS will estimate two regression equations, these being (1) Trigl on Age and Weight and (2) Cholest on Age and Weight.

See the PRELIS Examples Guide for an example.

Note:

This dialog box is associated with the RG command in PRELIS.

The Two-Stage Least-Squares option on the Statistics menu is associated with the Two-Stage Least-Squares dialog box.

Two-stage Least Squares (TSLS) often provide sufficient information to judge whether a structural equation model is reasonable or not. TSLS estimates and their standard errors may be obtained quickly, without iterations, for several typical structural equation models and is useful especially in the early stages of investigation.

	LISREL for W	indows - KLEIN.Isf	1	Two-Stage Least-Squares

Note:

This dialog box is associated with the RG and WITH commands in PRELIS.

Bootstrapping Option

The Bootstrapping option on the Statistics menu is associated with the Bootstrapping dialog box.

Bootstrap samples of an existing raw data set can be obtained with PRELIS. The user may specify the number of bootstrap samples, the sample fraction and the file names in which moment matrices are to be stored. Use the **Output Options** button for more control. Click **Syntax** to generate syntax or **Run** to run the example.
Bootstrapping	X
Number of bootstrap samples	100
Sample fraction	50
Save:	Filename:
✓ All the MA-matrices	Bootstrap50.cov
✓ All the mean vectors	Bootstrap50.means
All the standard deviations	sdfile
Output Options Cancel	Syntax Run

An example of bootstrapping can be found in *PRELIS Examples Guide*.

Note:

This dialog box is associated with the BS and FS keywords in PRELIS.

Output Options Option

The Output Options option on the Statistics menu is associated with the Output dialog box.

The **Output** dialog box controls list output and is used to save results in external files. The following options are available:

- Specifying the type of moment matrix to be estimated and the filename to which the matrix is to be saved (CM, KM, MM keywords).
- Files to which transformed raw data, asymptotic covariance matrix of estimated variances, covariances or correlations, mean vectors and standard deviations will be saved.
- Specifying the integer starting value for the random number generator (IX keyword).
- Specifying the width and number of decimals in each field for the raw data file to be saved (WI, ND keywords).
- Printout of summary statistics (XM, XB, XT options).
- Number of repetitions (used in data simulations; RP keyword).

Output

	Random seed		
Asymptotic Variances	Set seed to 123456		
Save to file: Print in output			
	OK Cancel		

Note:

This dialog box is associated with the OU command in PRELIS.

1.3.7 Graphs Menu

The **Graphs** menu is used to make univariate, bivariate and multivariate plots of the data in a LISREL system file (*.**Isf**).

The following graph types are available:

- Univariate: Bar chart, pie chart and histogram.
- Bivariate: Box-and-whisker plot, 3-D bar chart, scatter plot, and line plot.
- Multivariate: Scatter plot matrix.

Attributes of the graph can be changed by using the Image dialog box.

The Univariate option on the Graphs menu is associated with the Univariate Plots dialog box.

A histogram is displayed if the selected variable has more than 15 distinct values, otherwise a bar chart will be displayed. By checking **Display normal curve**, the normal distribution approximation to the histogram is also displayed in the form of a smooth curve. Pie charts or bar charts can also be created using the **Univariate Plots** dialog box, provided that the selected variable is ordinal.

A pie chart of the variable BIRTHMON (a variable in the LISREL system data **file holz.lsf**) is obtained by checking the **Pie Chart** radio button:

Univariate Plots	
List of variables GENDER AGEYEAR BIRTHMON VISPERC CUBES LOZENGES PARCOMP WORDMEAN ADDITION COUNTDOT SCCAPS AGEMON	 Bar chart Pie chart Histogram Interpolated curve overlay Normal curve overlay The default number of class intervals for a histogram is 15. This number may be changed to a smaller value in the range of 5-14. Number of class intervals
	Plot Cancel

Bivariate Option

The Bivariate option on the Graphs menu is associated with the Bivariate Plots dialog box.

The selected *Y*-variable is plotted against the selected *X*-variable. A **box-and-whisker plot**, **3-D bar chart, scatter plot or line plot** can be selected. The line plot is obtained by taking the arithmetic average of all the *Y*-values that correspond to the same *X*-value. A 3D-bar chart of two ordinal variables may also be produced.

Box-and-Whisker Plot

A box-and-whisker plot is useful for depicting the locality, spread and skewness of a data set. It also offers a useful way of comparing two data sets with each other with regard to locality, spread and skewness. A boxand-whisker plot of the variables LOZENGES and BIRTHMON (available in the LISREL system data file **holz.lsf**) is obtained by checking the **Box-and-Whisker Plot** check box.

From the graphical display above, it is evident that there is little, if any, relationship between the LOZENGES scores and the birth month of a person.

Scatter and Line Plots

A scatter plot and line plot of the variables PARCOMP and SENCOMP (available in the LISREL system file **holz.lsf**) are obtained by checking the **Scatter Plot** and **Line Plot** check boxes:

	Bivariate Plots	NOR WORKS	
List of variables GENDER AGEYEAR BIRTHMON VISPERC CUBES LOZENGES PARCOMP WORDMEAN ADDITION COUNTDOT SCCAPS AGEMON Box and Whisker Plot Got Lowe SENCOMP Count Dot SCCAPS AGEMON Count Dot SCCAPS COUNTDOT SCC	List of variables GENDER AGEYEAR BIRTHMON VISPERC CUBES LOZENGES PARCOMP WORDMEAN ADDITION COUNTDOT SCCAPS AGEMON	Select ≥> ≤< Remove Select >> << Remove Box and Whisk 3D Bar Chart Scatter Plot Line Plot	Y variable: PARCOMP X variable: SENCOMP ker Plot Plot Cancel

The plot reveals a relatively strong linear correlation (r = 0.733) between these variables.

3-D Bar Chart

A three-dimensional bar chart of the variables BIRTHMON is obtained by checking the **3-D Bar Chart** check box:

Bivariate Plots	
List of variables GENDER AGEYEAR BIRTHMON VISPERC CUBES LOZENGES PARCOMP SENCOMP WORDMEAN ADDITION COUNTDOT SCCAPS AGEMON	Select ≥> Y variable: ≤< Remove
	Line Plot Cancel

From this plot, it may be deduced that there is an approximately even split of males and females across month of birth.

Multivariate Option

The Multivariate option on the Graphs menu is associated with the Scatter Plot Matrix dialog box.

Scatter Plot Matrix		X
List of ⊻ariables: Group Age Length Weight %Fat Strength Trigl Cholest	Add ≥> ≤< Remove	<u>S</u> elected: Age Trigl Cholest
	Add >> <td>Mark by: Group</td>	Mark by: Group
To select more than key while clicking on	Pl <u>o</u> t one variable at a time, the variables to be se	Cancel hold down the CTRL lected

Suppose (X_i, Y_i) , i = 1, 2, ..., n indicate the paired measurements of two variables *X* and *Y*. A two-dimensional representation of these pairs of observations is known as a scatter plot. Such plots are particularly useful tools in an exploratory analysis conveying information about the association between *X* and *Y*, the dependence of *Y* on *X* where *Y* is a response variable, the clustering of the points, the presence of outliers, etc.

If only one predictor X is considered, a plot of Y against X provides a useful summary of a regression problem. A second predictor can be included by adding a third dimension to the two-dimensional plot of Y on X. However, if more than 2 predictors are to be included, the data cannot be viewed in total, because they are in too many dimensions. One helpful graphical method to study the relationships between variables in such a case is the scatter plot matrix, which enables the researcher to obtain multiple two-dimensional plots of higher dimensional data.

In the image below, data from the LISREL system data file **fitchol.lsf** are used. The variables Age, Trigl and Cholest are plotted against each other for the four groups of adult males. The groups were weightlifters, students, marathon athletes and coronary patients respectively.

From the scatter plot matrix we see that, by looking at the (Age, Trigl) and (Cholest, Trigl) plots, that the coronary patients, denoted with a "+" symbol, are clustered together, away from the main cluster of points formed by the other three groups. In the (Age, Age) segment, for example, the minimum and maximum values of the Age variables are given.

Options are provided to zoom in and out of any segment of the scatter plot matrix and to change the plot symbols, legends, format of text and colors used in the graphical display.

1.3.8 Image Menu

When a graph is displayed, the **Image** menu is activated. This menu enables one to change parameters or the scale of either the *Y* or *X* axis or both from linear to logarithmic.

Parameters Option

The **Parameters** option is used to change attributes of the graph displayed and is associated with the **Graph Parameters** dialog box. This dialog box is used to change the position, size and color of the currently selected graph and its plotting area.

The following functions are defined:

- The Left, Top, Width and Height edit controls allow the user to specify a new position and size of the graph (relative to the page window) and of the plotting area (relative to the graph window).
- The **Color** drop-down list box is used to specify the graph window color and the color of the graph's plotting area.
- If the **Border** check box is checked, the graph will have a border around it.
- If the **Border** check box is checked, **the Border Attributes** button leads to another standard dialog box (the **Line Parameters** dialog box discussed elsewhere in this section) that allows specification of the thickness, color, and style of the border line.

Graph	Param	ete	rs				
Grap	oh 🚽						
L <u>e</u> ft	0.5	%	<u>W</u> idth	98.6	%	Co <u>l</u> or	Pale Blue 🔻
Top	0.4	%	<u>H</u> eight	98.4	%

Plott	ing Area	a					
Le <u>f</u> t	14.0	%	Width	72.0	%	Colo <u>r</u>	Pale Green 🔻
То <u>р</u>	14.0	%	Hei <u>g</u> ht	72.0	%		
						<u>0</u>	K <u>C</u> ancel

In addition to the **Graphs Parameters** dialog box, a number of other dialog boxes may be used to change attributes of graphs. The dialog boxes accessible depend on the type of graph displayed. The dialog boxes are:

- Axis Labels dialog box
- Text Parameters dialog box
- Bar Graph Parameters dialog box
- Line Parameters dialog box
- Legend Parameters dialog box
- Pie Chart dialog box
- Pie Slice Parameters dialog box

The user may access any of these dialog boxes by double-clicking in the corresponding section of the graph. For example, double-clicking in the legend area of the graph will activate the **Legend Parameters** dialog box. Double-clicking on the title of the graph, on the other hand, will provide access to the **Text Parameters** dialog box.

These dialog boxes will now be discussed in turn.

Axis Labels Dialog Box

This dialog box is used for editing axis labels.

The following functions are defined:

- The Labels Position group box controls the position of the labels relative to the axis or plotting area.
- The Last Label group box allows manipulation of the last label drawing options. If **On** is selected, the last label is displayed like the others. If **Off** is selected, it is not displayed, If **Text** is selected, the text string entered in the edit box below will be displayed instead of the last numerical label.
- The format of the numerical labels can be specified using the radio buttons in the **Format** group box.
- The **Date Parameters** group box becomes active once the **Data** radio button is checked. The **Date Format** box selects the date format to use for labels, while the **Date Time Base** box selects the time base (minute, hour, day, week, month, year) for the date calculations. The **Starting Date** drop-down list boxes specify the starting date that corresponds to the axis value of 0. All dates are calculated relative to this value.
- If the **Set Precision** check box is not checked, the labels' precision is determined automatically. If it is checked, the number entered into the **#Places** field specifies the number of digits after the decimal point.
- The **Text Parameters** button leads to another dialog box (see the next section) that controls the font, size, and color of labels.

Axis Labels	
Axis Labels Labels Position Delow Axis Above Axis Above Plot Below Plot Last Label On Off Text	Iext Parameters Format ● Decimal ● Scientific # Places: ● Engineering ● Time ● Date Date Parameters Date Format 8/15/98 Date Time Base Date Time Base Date Time Base Image: Starting Date Month Day Year Image: Starting Date Month Date Image: Starting Date Month Date Image: Starting Date Month Date Image: Starting Date Month Day Year Image: Starting Date Image: Starting D
	QK <u>Cancel</u>

Text Parameters Dialog Box

This dialog box is used for editing text strings, labels, titles, etc. It can be called from some of the other dialog boxes controlling the graphic features in LISREL.

Text Para	meters
<u>T</u> ext:	Cholest
<u>F</u> ont:	Arial 🔹
Co <u>l</u> or:	Red 🔻
<u>S</u> ize:	11 -
🔲 <u>B</u> old	Italics Underline
	OK <u>C</u> ancel

The following functions are defined:

- The **Text** edit control allows the user to edit the text string.
- The Font drop-down list box allows control of the font typeface.
- The text color can be selected from the **Color** drop-down list box.
- The size of the fonts, in points, is controlled by the **Size** drop-down list box.
- The **Bold**, **Italic** and **Underline** check boxes control the text style.

Bar Graph Parameters Dialog Box

This dialog box is used for editing the parameters of all bars in a regular bar graph, or a selected group member of grouped bar graphs.

It operates as follows:

- If the **Border** check box is checked, the bars have a border around them. In this case, the **Border Attributes** button leads to another standard dialog box that controls border thickness, color and style.
- The **Data** button leads to the spreadsheet-style window for editing plotted data points.
- The Hatch Style drop-down list box allows the user to choose the hatch style for bars.
- The **Bar Color** scrolling bars control the bar RGB color.
- The **Position** radio buttons control the bar position relative to the independent variable values.
- The Width string field allows the user to enter the bar width in units of the independent variable.

Line Parameters Dialog Box

This dialog box is used for editing lines in the graph and is displayed by selecting the **Plot Parameters, LINE ATTRIBUTES...** option.

It has the following functions:

- The **Color** drop-down list box controls the line color.
- The **Style** drop-down list box, visible when activated, allows selection of a line style.
- The Width control specifies the line width, in screen pixels.

Legend Parameters Dialog Box

This dialog box allows the editing of legends. It opens when a mouse is double-clicked while the cursor is anywhere inside the legend box, except over a symbol representing a plotting object.

Legend Para	neters	
-Legend Re	tangle	
Left 4.0	% <u>W</u> idth 12.6 % Co <u>l</u> or White ▼	
Тор 20.0	% <u>H</u> eight 21.8 %	
✓ Border	BORDER ATTRIBUTES	
Wlif	● OK	
Mara	Cancel]
	TEXT PARAMETERS	

This dialog box operates as follows:

- The Left, Top, Width and Height string fields allow the user to specify a new position and size of the legend bounding rectangle relative to the graph window.
- The **Color** drop-down list box specifies the legend rectangle background color.
- If the **Border** check box is checked, the rectangle will have a border. In this case, the **Border Attributes** button leads to another standard dialog box that controls border thickness, color and style of the border line.
- The multi-line text box in the lower left corner lists and allows editing of each of the legend text strings.
- The **Text Parameters** button leads to the **Text Parameters** dialog box discussed earlier.

Pie Chart Dialog Box

This dialog box is used for editing pie charts.

Pie Chart P	arameters		
Center⊻	60.0 %	Djameter	45.0 %
Center <u>Y</u>	40.0 %		
Slice #1			
			AMETERS
		ОК	<u>C</u> ancel

It operates as follows:

- The string fields **Center X**, **Center Y**, and **Diameter** allow the user to enter the pie position and size in graph normalized coordinates.
- \circ The drop-down list box contains labels for individual slices. It allows the user to select a slice for editing.
- \circ The **Details** button leads to the dialog box for editing the selected pie slice parameters.
- The **Text Parameters** button leads to the **Text Parameters** dialog box and allows the user to specify the font, size, and color of the pie chart labels.

Pie Slice Parameters Dialog Box

This dialog box (see above) is used for editing a selected pie slice.

It operates as follows:

- If the **Border** check box is checked, the slice will have a border. In this case, the **Border Attributes** button leads to another standard dialog box that controls border thickness, color and style of the border line.
- The Hatch Style drop-down list box allows the user to choose the hatch style for the slice.
- The **Pie Slice Color** scrolling bars control the RGB color of the slice.
- The **Explosion** string field allows the user to enter the percentage value of the explosion coefficient.
- The Value string field allows the user to enter a data value.
- The Label string field allows the user to edit the pie slice text label.

Plot Y on X / Plot log(Y) on X Options

The next set of options on the **Image** menu (see below) are only activated once a graph is displayed. By selecting any of these options, the graph can be changed from one form to the other as shown below, where the **Plot Y on X** and **Plot log(Y) on X** options are used.

1.3.9 Multilevel Menu

Multilevel models may be fitted to data by using the options on the **Multilevel** menu. This menu is only available when a LISREL system data file (*.lsf) is opened.

The **Multilevel** menu has three submenus, for linear, generalized linear and non-linear regression models respectively, as shown below.

File Edit Da	ta Transformati	on Statistics	Graphs	Multilevel	SurveyGLIM	View Window
🗄 🗅 😹 🗮 👗 🍋 🛍 👷 👷 🎒 🕄 👘			Linea	r Model	+

L. Marc_rema	ie neignaesi		-	Non-	Linear Regressi	on 🕨 📙
	Case	Occasio	He	eight Age_Yr Ge		Gender
1	1.00	1.0	0	88.30	2.00	-1.00

For more information multilevel models, see the *Multilevel Generalized Linear Modeling Guide* and the *Multilevel Modeling Guide*.

Non-Linear Model Option

To illustrate the features of the LISREL multilevel non-linear regression module, open the LISREL system data file **male_female height.lsf**. This dataset contains repeated measurements of height and age (in years) for 150 male and 130 females based on simulated data. The variable *Gender* is coded 0 for males and 1 for females.

The **Non-Linear Model** option allows access to four dialog boxes as shown below. The four dialog boxes listed will now be discussed in turn.

ormation	Statistic	s Graphs	Multile	evel SurveyG	IIM	View	Windo	wc	Help
长长	a 🖪	?	Lir	near Model			×

male_female height.LSF	✓ Data Toolbar

Data Toolbar Option

ዮ 도 💷 🖾 🖽

An explanation of the icon buttons, from left to right, is as follows:

- Insert variable
- o Insert case
- o Univariate plot
- o Bivariate plot
- o Multivariate plot

1.3.11 Window Menu

The Window menu allows the user to arrange windows and switch between windows.

Win	idow Help					
	Cascade					
	Tile					
	Arrange Icons					
	Close All					
	1 female_male.PR2					
✓	2 female_male.psf					

1.4 Text Editor Window

When a text file is opened, the main menu bar changes to:

1.4.1 File Menu

The File menu now includes options to run LISREL and PRELIS syntax files, except when the file opened is of type *.out.

File	Edit	Options	Window	Help
	New			
	Open.			
	Impor	t Data		
	Close			
	Save			
	Save A	4s		
	Run L	SREL		F5
	Run P	RELIS		F7

1.4.2 Edit Menu

The **Edit** menu available in the text editor window adds standard Windows functionality to the manipulation of text files opened in the text editor window, as shown below.

Edit	Options	Window Help
	Undo	Ctrl+Z
	Redo	Ctrl+R
	Cut	Ctrl+X
	Сору	Ctrl+C
	Paste	Ctrl+V
	Select all	
	Find	
	Replace	
	Insert File .	
	Insert Pictu	ire

1.4.3 Options Menu

When a text file is opened, the **Options** menu is activated. This menu is shown below. It controls the **Toolbar**, **Status Bar** and **Edit Bar** as well as the general appearance of the text displayed.

Edit Bar Option

The **Edit Bar** is activated whenever a text file is displayed in the text editor window. Examples, apart from standard text files, are:

- PRELIS syntax or output files,
- LISREL project files (*.lpj), or
- SIMPLIS project files (*.**spj**).

The functions of the button icons are described below. To select the text to be changed, click and drag the cursor over the text that you want to change and then click on the appropriate icon button of choice.

- **Bold Text**: Change marked text to bold face.
- **Italic Text**: Change marked text to italic type.
- **Underline Text**: Underline marked text.
- Strike Through: Draw a horizontal line through marked text.
- New Font and Color: Change font and color of marked text or of document. By clicking this icon, a pulldown menu is activated which provides a list of fonts and colors that are available on your system. If you change fonts, keep in mind that LISREL and PRELIS output require fonts with fixed pitch (so-called monospace fonts since each character has the same width) to keep tables and matrices vertically aligned.
- Align Left: Left align selected text. Note that text with blanks inserted in the beginning of each line will not left align since blanks are also interpreted as valid text characters.
- **Center Text**: Center selected text. Note that text with blanks inserted in the beginning of each line will not left center since blanks are also interpreted as valid text characters.
- Align Right: Right align selected text.
- Justify Text: Change the paragraph justification from the default left justification (or "ragged" right).
- Single Space Text: Marked text is displayed with single vertical space, that is, no blank lines between successive lines of text.
- **1.5 Spacing**: Marked text is displayed with about half the width of one line of text additional space between lines.
- **Double Space Text**: Marked text is displayed with double vertical space, that is, a blank line is inserted between any two successive lines of text.

1.5 The Path Diagram Window

When a path diagram is displayed or a *.pth file is opened, the main menu for the path diagram window appears. The **Path Diagram** menu bar has the **File**, **Edit**, **Setup**, **Draw**, **View**, **Image**, **Output**, **Window** and **Help** menus as shown in the window below.

👼 LISREL 1	for Windows - EX31A.PTH	
<u>F</u> ile <u>E</u> dit	<u>S</u> etup <u>D</u> raw <u>V</u> iew <u>I</u> mage <u>O</u> utput <u>W</u> indow <u>H</u> elp	
0 🖻 🖻	; 🖬 👗 ங 🥵 🚑 🛛 📍	
Groups:	Analysis of Reader Reliability in E 🔹 Models: X-Model 🔹	Estimates:

1.5.1 File Menu

An addition to the File menu when a path diagram is displayed, is the ability to export a *.**pth** file to a *.**emf** or *.**gif** format.

File	Edit	Setup	Draw	View	Image	Out
	New				Ctrl+	٠N
	Open.				Ctrl+	0
	Impor	t Data				
	Close					
	Save				Ctrl+	+S
	Save A	As				
	Export	t As Met	tafile (.v	vmf)		
	Export	t As Gif	file (.gif)		

1.5.2 Edit Menu

In the path diagram window, the Edit menu has only three options, all standard Windows functions.

Edit	setup	Draw	View
	Undo	C	Ctrl+Z
	Delete		Del
	Select A	I C	Ctrl+A

1.5.3 Setup Menu

The **Setup** menu is displayed below.

Setup		Draw	View	Image	Output				
	Title and Comments								
	Groups								
	Variables								
	Data								
	Bu	uild LISR	EL Syn	tax	F4				
	Βι	uild SIM	PLIS Sy	ntax	F8				

When building LISREL or SIMPLIS syntax from a path diagram, the options displayed are used to:

- Provide a title and comments
- Provide group names (multi-sample analysis)
- Create a list of observed and latent variables
- Specify type and location of the input data, for example: covariance matrix, c:\temp\ex10.cov
- Build LISREL or SIMPLIS syntax

Note:

The options on the **Setup** menu are associated with the following LISREL syntax:

- Title and Comments: TI command
- **Groups**: NG keyword
- Variables: LA, LE, LK commands
- Data: DA command

The options on the **Setup** menu are illustrated in the LISREL *Examples Guide*.

Title and Comments Option

The Title and Comments option on the Setup menu is associated with the Title and Comments dialog box shown below.

The **Title and Comments** dialog box is used to provide a title and additional comments. Use of it is optional. Click **Next** to go to the **Group Names** dialog box.

Title and Comments	×
Title	
Analysis of Reader Reliability in Essay Scoring Votaw's Data	
Comments	Next>
	ОК
	Cancel

Groups Option

The Groups option on the Setup menu is associated with the Group Names dialog box shown below.

The **Group Names** dialog box is used to provide labels in the case of multiple-group analysis. If only one group is analyzed, this dialog box is not used. Click **Next** to go to the **Labels** dialog box. Click **Previous** to go to the **Title and Comments** dialog box. See the LISREL *Examples Guide* for an example.

	Note: For m	Proceed to the next screen if the analysis is for one group only. ulti-sample data, insert group name rows by using the Down Arrow key.	

Variables Option

The Variables option on the Setup menu is associated with the Labels dialog box shown below.

The Labels dialog box is used to provide labels for variables. Click Next to go to the Data dialog box. Click Previous to go to the Group Names dialog box. The Add/Read Variables button provides access to the Add/Read Variables dialog box. The Add Latent Variables button is used to go to the Add Variables dialog box. The Add/Read Variables and Add Variables dialog box are discussed next.

Labels	
Observed Variables Name 1 ORIGPRT1 2 WRITCOPY 3 CARBCOPY 4 ORIGPRT2	Latent Variables Name 1 Esayabil Next > OK Cancel
Add/Read Variables	Add Latent Variables
Move Down Move Up Press the Down Arrow to insert a row Press the Insert key to insert em	Move Down Move Up ne row at a time once a label has been typed in the previous pty rows or the Delete key to delete selected rows

Add/Read Variables Dialog Box

This dialog box is used to read variables (labels) from an external LISREL data summary file (*.**dsf**) or a LISREL system data file (*.**lsf**), or to type in names.

- The **Read from file** radio button and drop-down list box may be used to select the type of file to be read.
- The **Browse** button allows the user to browse for the file to be used.
- The Add list of variables radio button is used to access the Add Variables dialog box.

Add/Read Variables		×

The Add Variables text box shown below is activated if one clicks the Add Latent Variables button on the Labels dialog box.

Add Variables	×
Add one or list of variables here (e.g., var1 - var5): 	OK Cancel

Data Option

The Data option on the Setup menu is associated with the Data dialog box shown below.

The **Data** dialog box is used to specify, for each group, the file type. For example, a *.**dsf** file is associated with covariances/correlations (see **Statistics from** drop-down list box) and a *.**lsf** file with raw data. The **Number of Observations** field is used to indicate the number of observations to be used in the analysis. The **Matrix to be analyzed** drop-down list box is used to select the type of matrix to be analyzed, while the **Weight** check box allows the specification of a weight matrix, such as, for example, an asymptotic covariance matrix. See the examples in the LISREL *Examples Guide*.

Click **Previous** to go to the **Labels** dialog box. Click **OK** to return to the path diagram window.

Build LISREL / SIMPLIS Syntax Options

The final two options on the **Setup** menu allows the users to build LISREL or SIMPLIS syntax from the path diagram.

1.5.4 Draw Menu

When creating LISREL / SIMPLIS syntax from a path diagram or whenever a path diagram is displayed on the screen, the **Draw** menu is activated. One can either use the **Draw** toolbox shown at the bottom of the image below or select an option from the **Draw** menu. If an item is selected from this menu, the corresponding toolbar icon is highlighted.

•	Select						
	One-way Path						
	Multi-Segment Path						
	Error Covariance or Factor Correlation						
	Plain Text						
	Zoom						

The options and corresponding icons are discussed in turn below.

Select Object Option

The **Select Object** option is used to select one or more objects in the path diagram. A selected object may be moved or resized. The color, font style, line thickness, etc. can also be adjusted. This is done by clicking the right mouse button once an object is selected.

One-way Path Option

The **One-way Path** option is used to draw a path from one variable to another. The diagram below demonstrates the drawing of a path from the latent variable ksi1 to the observed variable x2.

To draw the path, click on the **One-way Path** icon button (single-headed arrow icon button on the toolbox to the right in the image above). Click with the left mouse button inside the ksi1 ellipse and drag the mouse to within the x2 rectangle. Release the mouse button. To deactivate the arrow function, click on the **Select Object** icon.

Two-way Path Option

The **Two-way Path** option (double-headed arrow icon button on the toolbox to the right in the image below) is used to denote a correlation between two variables. In the diagram shown below, a covariance path is drawn between the variables ksi1 and ksi2.

To draw this path, click on the **Two-way Path** icon button to activate this choice. Click on the horizontal line indicating the ksi1 variance and drag the mouse cursor to the horizontal line indicating the ksi2 variance.

Multi-Segment Line Option

The **Multi-segment Line** option, represented by the icon button highlighted on the toolbox to the right in the image below, is used to draw a path as a series of segments.

Note:

Do not use this tool for drawing a single-segment line.

Click the **Multi-segment Line** icon button and move the mouse button to within the ellipse (ksi1). Without releasing the left button, drag a vertical line to the desired position and release the mouse button.

While at this position, click the left mouse button and drag a horizontal line to the desired position, then briefly release the mouse button while remaining at this position.

Finally, drag a vertical line down to within the rectangle (x1) and release the mouse button. Undo the **Multi-Segment Line** option by clicking on the **Select Object** icon button (highlighted in the image below) of the draw toolbar.

Plain-Text Option

The Plain-Text option may be used to add additional text to the path diagram prior to printing it.

Click on the **Plain-Text** icon button (see highlighted icon in the image above) and then draw a rectangle on the path diagram by dragging the mouse button diagonally from top left to bottom right. Release the button and enter the text. Deactivate the **Plain-Text** icon button by clicking the **Select Object** icon button.

The font and style of the text may be changed by selecting the text area as an object. By clicking the right mouse button, a pop-up dialog box appears. From this menu select **Options**.

Use the **Options** dialog box discussed elsewhere in this section to change the font style and color.

Zoom Option

Use the **Zoom** icon button (highlighted in the toolbox shown below) to reduce or increase the size of the path diagram.

Use the right mouse button to increase and the left mouse button to decrease the size of the path diagram.

1.5.5 View Menu

When a path diagram is open in the path diagram window, the **View** menu is expanded with options specific to path diagrams, as shown below.

View	Image	Output	Windo
Too	lbars		· · ·
Gro	ups		×
Mod	del Type:	5	
ESCI	mations		
Opt	ions		
Opt	ion (Obj	ect)	
Grio	l Lines	Ctrl	+G

Toolbars Option

The Toolbars option provides access to the Toolbar, Status Bar, Type Bar, Variables and Drawing Bar options.

Four of the five toolbars that can be selected through use of the **Toolbars** options are shown below. In the first image, the **Toolbar** is displayed at the top of the image, with the **Type Bar** right below it. In the second image, the **Variables** bar, which is added to the left of the path diagram window, is shown The **Drawing Bar**, also known as the **Draw** toolbox, is shown to the right of the **Variables** bar.

_ ≱ ≥ ≥ ≥ ≥ ≥ ≥ ≥ ≥ ≥ ≥	a 1 ?		
Groups: Group 1: Testing Equality Of Far	Models: X-Model	-	Estimates: Estimates

Model Types Option

The Model Types option provides access to options allowing the user to view, in turn,

- The basic model
- The X-model
- The Y-model
- The structural model
- Correlated errors
- The mean model.

Vie	w Image Output	Window	Help

	Option (Object)		Structural Model
_	Grid Lines	Ctrl+G	Mean Model

Selecting any of these options will lead to the display of the values associated with the selected option on the path diagram.

Estimations Option

The Estimations option provides access to options allowing the user to view, in turn,

- The estimates
- The standardized solution

- A conceptual diagram
- *t*-values
- The modification indices
- The expected changes.

Selecting any of these options will lead to the display of the values associated with the selected option on the path diagram.

	Estimations	•		Estimates
	Options Option (Object)			Standardized Solution Conceptual Diagram
	Grid Lines	Ctrl+G		Modification Indices
				Expected Changes

Options Option

The Options option on the View menu is associated with the Options dialog box.

This dialog box is used to control the appearance of objects on the path diagram.

- The **Outline**, **Outline** Color, Fill Color and Font (of the label) for any type of object on the path diagram can be changed here.
- The type of object to which these changes should be applied is selected using the **Type of Object** dropdown list box.
- The color of non-significant *t*-values may be adjusted using the **Non-significant t Color** button which provides access to a color palette from which to select a new color.
- Background color may be adjusted using the **Background Color** button which provides access to a color palette from which to select a new color.

			3.43 ORIGPRT1

The Option (object) option on the View menu is associated with the Options for Object dialog box shown below.

This dialog box may be used to change the attributes on any selected object. An object in the path diagram window may be selected using the **Select object** icon on the **Draw** toolbox.

Options for Object		
Outline Outline Color	Fill <u>C</u> olor	OK Cancel

Grid Lines Option

The **Grid Lines** option on the **View** menu can also be selected to display grid lines when drawing a new path diagram. For further information, see Chapter 4.

1.5.6 Image Menu

If the active window is a path diagram window, the **Image** menu is activated. From the **Edit** menu, choose **Select all**. The path diagram can then be rotated, moved, etc. A black and white path diagram, useful for using in publications, can be created using the **Black and White** option on this menu.

Use of these options is illustrated in the examples given in Chapter 4.

1.5.7 Output Menu

The **Output** menu enables one to change the default SIMPLIS or LISREL output syntax.

- For example, the number of decimals displayed and the method of estimation may be changed by using the menus that are activated when an **Output** selection is made.
- If a model has been fitted to the data, one may view the **Fit Indices** file by selecting this option on the **Output** menu.

Output Window Help		
SIMPLIS Outputs		
LISREL Outputs	×	Estimations
Fit Indices	Ctrl+F	Selections
		Save

SIMPLIS Outputs Option

The **SIMPLIS Outputs** option on the **Output** menu is associated with the SIMPLIS **Outputs** dialog box shown below. This dialog box may be used to control the method of estimation and other options associated with the iterative procedure. It may also be used to change the number of decimals in the output, the printing of residuals, etc.

SIMPLIS Outputs						
Method of Estimation						
Maximum Likelihood		Generalized Least Squares				
Two-stage Least Squares	🔘 Two-stage Least Squares		Weighted Least Squares			
Instrument Variables	🔘 Instrument Variables		O Diagonally Weighted Least Squares			
O Unweighted Least Squares						
🔽 Set Check Admissibility to	20	Iterations		ОК		
Maximum Number of Iterations	500			Cancel

Print Residuals	📃 Wide	Print				
🔲 Save Sigma (fitted matrix)	EX31A.s	is	Select LISREL Outputs			
Crossvalidate File	EX31A.cvf		🔽 Invoke Path Diagram			
Latent Variable Scores:	PSF with	raw data	Observa	tional Residuals		

Note:

The **SIMPLIS Outputs** option is associated with the Output command in SIMPLIS.

LISREL Outputs Option

The LISREL Outputs option on the Output menu is associated with three dialog boxes:

- Estimations
- Selections, and
- Save.

These three dialog boxes are discussed next.
The LISREL Outputs option is associated with the OU command in LISREL.

Estimations Dialog Box

The **Estimations** dialog box may be used to control the method of estimation and other options associated with the iterative procedure.

Estimations	* 1894	X
Metriod of Estimation Maximum Likelihood	C Generalized Least Squares	
Two-stage Least Squares	O Unweighted Least Squares	
Instrument Variables	Weighted Least Squares	
	Diagonally Weighted Least Squares	Next >
Estimate options	Significance Level 1	Default
Ridge Constant 0.00000000	Compute Starting Values	OK
Automatic Model Modification	Check Scales for Latent Variables	Cancer
Control options		
Maximum CPU Time (seconds)	172800 (hint: 48.0 hours)	
Maximum Number of Iterations	100	
Convergence Criterion	0.000100000	
🔽 Check Admissibility to	20 Iterations	

Note:

This dialog box option is associated with the OU command in LISREL.

Selections Dialog Box

The **Selections** dialog box allows the user to invoke a path diagram, control the number of decimals in the output, and specify the type of output required.

Selections	X
Selected Printout Correlation Matrix of Parameter Estimators Residuals, Standardized Residuals, Q-plot and Fitted Covariance Matrix Total Effects and Indirect Effects Factor-scores Regression Standardized Solution Completely Standardized Solution Technical Output Miscellaneous Results (see Sec 1.11) Excluding Modification Indices Print All	Next > OK Cancel
Number of Decimals (0-8) in the Printed Output 3	
✓ Invoke Path Diagram	

Note:

This dialog box option is associated with the OU command in LISREL.

Save Matrices Dialog Box

The **Save Matrices** dialog box allows the user to specify external files to which, for example, the asymptotic covariance matrix of parameter estimates and the t-values, can be saved.

Save	File Name:	Save	File Name:
Lambda-Y	EX31A.lys	Карра	EX31A.kas
🗾 Lambda-X	EX31A.lxs	Matrix Analyzed	EX31A.mas
Beta	EX31A.bes	Asym.Cov of Param.Est.	EX31A.ecs
Gamma	EX31A.gas	Regr.Matrix of Latent	EX31A.rms
Phi	EX31A.phs	Fitted Matrix	EX31A.sis
Psi	EX31A.pss	Goodness of Fit	EX31A.gfs
Theta-Epsilon	EX31A.tes	Est. Free Param.	EX31A.pfs
Theta-Delta	EX31A.tds	Std. Errors	EX31A.svs
Theta-Delta-Epsilon	EX31A.ths	t-Values	EX31A.tvs
Tau-Y	EX31A.tas]	PSF with raw data
Tau-X	EX31A.tas	Latent Variable Scores	
Alpha	EX31A.als	Observational Residu	als

Note:

This dialog box option is associated with the **OU** command in LISREL.

1.6 SPJ Window

When a SIMPLIS project (*.spj) is created or opened, the main menu bar changes to:

LISREL for Windows - EX31A.SPJ	
<u>File Edit Setup Output Options Window H</u>	<u>l</u> elp
i 🗅 😹 😹 📕 🙏 🐂 🛱 🐓 🐙 🎒 🕇 💡 📑	
B Z Ц S 🎾 È È ≣ ≣ = = = =	

In addition, a keypad for use in changing syntax is displayed below the opened SIMPLIS project file as shown below. The only menu with differences in functionality is the **Setup** menu. For all other menus, the user is referred to the detailed discussion of these in previous sections of this chapter.

💭 EX31A.SP	J					×	
Analysis of Reader Reliability in Essay Scoring Votaw's Dat SYSTEM FILE from file 'C:\LISREL9 Examples\LS8EX\EX31A.DSF' Sample Size = 126 Latent Variables Esayabil Pelationships

		Fix	Set Error Variance	123	(,		
		Equal	Set Error Covariance	0.			

1.6.1 Setup Menu

In the case of the **SPJ** window, the **Setup** menu includes the following options that have already been discussed in the section dealing with options available in the case of the LSF window: **Title and Comments**, **Groups**, **Variables**, and **Data**.

New options available in the SPJ window are:

- **Build SIMPLIS Syntax**: This option allows the user to generate SIMPLIS syntax based on the SIMPLIS project currently open.
- **Build LISREL Syntax:** This option allows the user to generate LISREL syntax based on the SIMPLIS project currently open.

1.7 The LPJ Window

The main menu bar displayed when a LISREL project is opened is shown below.

😹 L	ISRE	EL f	or V	Vind	ows	- EX	(31A	LPJ.					
<u>F</u> ile	<u>E</u> c	lit	<u>S</u> e	tup	Mo	odel	<u>O</u> u	Itput	<u>0</u>	otio	ns	<u>W</u> indow	<u>H</u> elp
į 🗅	Ē	ß		X		â	¥	R	ð	1	Ŷ		
B	Z	u	S			= :		-	_	_		_	

One may use the **Setup**, **Model** or **Output** options on the main menu bar to add, modify or delete existing code. The **File** and **Edit** menus for the LPJ window are the same as those for the SPJ window discussed earlier.

1.7.1 Setup Menu

The **Setup** menu for the LPJ window has an additional option in the **Data** dialog box. This dialog box is accessed when the **Data** option is selected from the **Setup** menu. In the **Data** dialog box shown below, the **Next** button is activated.

Groups:		
	Estimate latent me	eans
Summary statistics Statistics from:	File type: Edit New	<pre></pre>
Covariances 👻	LISREL System Data 🔹 🔻	
Full matrix Fortran formatted	File name: Browse C:\LISREL9 Examples\LS8EX\EX314	ОК
Mean included in the data	Statistics included:	Cancel
Weight	Number of observations	
Include weight matrix	126	
Weight file name Browse	Matrix to be analyzed Covariances]

This button provides sequential access to the following dialog boxes:

- Define Observed Variables
- Define Latent Variables
- Model Parameters
- Constraints
- Selections
- Save Matrices

The **Selections** and **Save Matrices** dialog boxes are discussed in the previous section on the path diagram window. The use of these dialog boxes is illustrated and discussed in Section 4.7.

1.7.2 Model Menu

The **Model** menu is activated when a LISREL project (*.lpj) file is opened. For more information on how to use the **Observed Variables**, Latent Variables, Parameters and Constraints dialog boxes, see the examples in Chapter 4. Some of these dialog boxes may also be accessed using the **Data** dialog box discussed earlier.

EISREL for Windows - EX31A.LPJ						
File Edit Setup	Model Output Options Wi	ndow				
🗄 🖻 📾 🗮 👗	Observed Variables					
BZ 🛛 S 🔊	Latent Variables					
	Parameters					
EX31A.LPJ	Constraints					

The four options correspond to the following dialog boxes, which are discussed in detail in Section 4.7:

- Define Observed Variables
- Define Latent Variables
- Model Parameters
- Constraints

Note:

The options on the Model menu are associated with the following LISREL syntax:

- Observed Variables: LA command
- Latent Variables: LK and LE commands
- **Constraints**: CO command.

1.8 Output Window

When an output file is displayed, it is shown in the text editor window. There is only one additional option that is available to the user in the case of an output file, and this is to be found on the **File** menu. For all other options available, the user is referred to the section describing the functionality of the text editor window.

1.8.1 File Menu

The option to convert the output file a Webpage format (*.htm) is available to the user.
